

Improved Outcomes Through Data-Driven Decisions

RESOURCE GUIDE

Data-driven decisions are based on the analysis of data rather than on intuition or anecdotal evidence.

1. Link program goals to community needs assessment.
2. Track things that matter for your program, agency, community and funding source.
3. Use data to make informed decisions about future practice.
4. Use data to report to funders, agency boards, community partners and potential funders and partners.
5. Share the results of your data with staff to reinforce current practice or determine modifications necessary to meet outcomes.

Data Collection Cycle

Tools that support data-driven decision making:

- Logic model
- Action Plan
- SMART Goals
- Continuous Quality Improvement Process
